

Warren van Ryn

● **Resides:** Melbourne, Australia ● **Email address:** professional.warren@gmail.com ● **LinkedIn:** www.linkedin.com/in/warren-IT-Science
● **Portfolio:** https://wvr-spatial.github.io/Portfolio/

Profile

Geospatial professional with active field and consultancy roles, a Bachelor of Science in Geospatial Science (Distinction, GPA 6.73), and a decade of prior experience in IT systems analysis and digital design. This cross-disciplinary foundation enables an end-to-end perspective: from field data collection and sensor integration through spatial modelling, database management, and front-end visualisation.

Technical capabilities span remote sensing, spatial analysis, WebGIS, photogrammetry, and UAV platforms, underpinned by a strong grounding in databases, networks, Python, and SQL. This systems background directly informs better geospatial workflow design, automation, and the identification of data constraints before they become project problems.

Interested in roles focused on spatial analytics, remote sensing, or geospatial systems integration, and environments where technical depth, adaptive problem-solving, and clear stakeholder communication produce better spatial outcomes.

Skills

GIS Platforms ARCGIS PRO, QGIS, MAPINFO, WEBGIS	Remote Sensing MODIS, SENTINEL-2, NDVI/EVI, IMAGE CLASSIFICATION	Field & Survey GNSS, QFIELD, UAV/DRONE OPERATIONS, ROV (BASIC)	Programming & Data PYTHON, SQL, MAPBASIC, JAVASCRIPT
Photogrammetry ORTHOMOSAIC, DSM/DEM, POINT CLOUD PROCESSING	Design & Visualisation ADOBE CREATIVE SUITE, ARCGIS STORYMAPS	Systems NETWORK ADMINISTRATION, ITSM, DATA MANAGEMENT	Live Data & API Integration NASA FIRMS, USGS APIS, GEOJSON PIPELINES, CLIENT-SIDE ETL, CSV STREAM PROCESSING, CORS HANDLING

Professional Experience

03/2026 – present
Melbourne, Australia

Field Engineer & GIS analyst RapidMap Services

- Promoted to a full-time engineering and analyst role within the parent organisation following the Iconyx field technician contract, with expanded responsibility across the full geospatial project lifecycle.
- Conduct field data capture, GNSS surveys, asset inspections, and on-site mapping across client projects
 - Perform GIS data preparation, spatial analysis, digitisation from aerial and remotely sensed imagery, and production of maps, plans, and reports
 - Execute office-based QA/QC including MapBasic code review and formal documentation of QC procedures
 - Develop automation routines using MapBasic and Python to improve workflow efficiency and repeatability
 - Manage project data lifecycle: processing, maintenance, backup, archival, and retrieval
 - Client liaison and delivery reporting as required

12/2025 – present
London - Remote,
United Kingdom

Geospatial Data Visualisation Consultant Crecganford

- Consult on spatial data visualisation strategy to improve accessibility of cultural distribution datasets for a UK-based mythology and folklore research organisation.
- Deliver digitisation products, data integration, and spatial analysis outputs supporting both academic research and public communication.

02/2025 – 03/2026
Bundoora, Australia

Geospatial field technician ICONYX - a division of RapidMap

- Employed for ongoing spatial data collection events. Role comprising data collection using geospatial tools, client/site liaison, scheduling & logistics, data preparation, and QA.
- Responsibilities include ensuring accuracy in field data, documenting site conditions, and providing structured notes for emergency services markers. Work involves collaboration with stakeholders to optimise data usability and integrate findings into GIS systems.

04/2016 – 12/2024
Melbourne, Australia

Systems Analyst/Network Operations Specialist CMG - FUJIFILM Business Innovation Aus. - IAG

- Engaged via a labour-hire organisation in a contract I.T. support role for Fujifilm Business Innovation Australia's clients, managing multiple sites within IAG/CGU.
- Tasked with monitoring, managing, and responding to alerts on client print/document network systems.
- Accountable for ensuring availability and performance, including fault analysis and reporting. Initially focused on administering legacy hardware and backend systems, with responsibilities evolving during recent fleet standardisation and upgrade projects. Provided project support during the 2020/2021

Professional Experience

02/2013 – 07/2015
Docklands, Melbourne

lockdown and hybrid working initiatives.

Onsite Support Engineer CMG - Fuji Xerox - B.O.M. - Minter Ellison

- Employed via Labour-hire Agency CMG smart Services to Provide Service contract support for Fuji-Xerox Australia. Based onsite primarily for B.O.M & Minter Ellison Lawyers.
- Support role troubleshooting Level 1-2 hardware issues, focussing on repairs, upgrades and migrations. Co-ordinated and maintained user accounts, data integrity and device security. Strong emphasis on stakeholder feedback and reporting of key metrics.

2005 – 2012
Melbourne, Australia

Various Roles — Digital Design, Web Production & IT Support

- Earlier career in digital design, web production, and IT support across print, advertising, and contract environments. Full history available on request.

Selected Projects - (full portfolio at wvr-spatial.github.io/Portfolio)

FireWatch: Real-Time Wildfire Monitoring | MapLibre GL JS • NASA FIRMS API •

GeoJSON • JavaScriptLive WebGIS application monitoring thermal anomalies across AU/SEA using MODIS/VIIRS satellite telemetry.

- Client-side ETL pipeline converting live NASA CSV streams to GeoJSON; WebGL rendering sustaining 10,000+ concurrent fire points.
- Temporal filtering and data-driven styling expressing brightness temperature and detection confidence as visual variables.

Seismic Risk Monitor | Python • GeoPandas • Folium • Plotly • USGS API

Automated spatial risk assessment tool identifying populated areas at risk from live global seismic events.

- Live USGS feed ingested and spatially joined against Natural Earth populated places to flag cities within 50km of M4.0+ events; custom antimeridian handling resolves International Date Line geometry artefacts.
- Outputs interactive risk map with geodesic impact polygons and magnitude-ranked city charts, deployable as standalone HTML with no server dependency.

(High Distinction)

Brigalow CMZ Vegetation Health Assessment | Sentinel-2 • MODIS • QGIS • QField • ArcGIS Pro

Multi-index remote sensing analysis characterising vegetation condition and seasonal variability across Brigalow Belt sample areas.

- Derived and cross-compared NDVI, EVI, NDMI, and moisture index products from Sentinel-2 and MODIS time-series; scene classification used to isolate spectral anomalies within the study extent.
- Field validation workflow designed and executed using QField for mobile data collection and ground-truth verification of remotely sensed outputs.

Education

2022 – 2025

BSci. with Distinction | Geospatial Science
University of Southern Queensland
Minors in Maths & Physics

2020 – 2022

DPSc | Physical Sciences
University of Southern Queensland

2001 – 2003

B.A. | Interactive Media/Professional Writing
Victoria University

Associations

2023 – 2025
Australia

Member/GCA program Mentee
Geospatial Council of Australia

2024 – present
Australia

Member
Australian Association of Uncrewed Systems (AAUS)

2020 – present
Australia

Associate Member
Australian Institute of Physics

2019 – present
Australia

Member
Australian Citizen Science Association
